

Congratulations!

On your new Nest Thermostat

We **know** you're going to love it!
Here's a few tips to help you get started.

1. Even though it looks like it, your Nest is **not** a touchscreen. Use it just like a normal thermostat, **turn** the ring up when you want it a little warmer, and **turn** it down when you want it a little cooler.

2. **Press** your thermostat towards the wall to see more options. **Turn** the ring to select an option. **Press** the ring again to confirm your selection.

3. **To select Heating, Cooling, or Off:**
Press the thermostat ring to open the Quick View menu. **Turn** the ring to the mode you want, then **press** to select it.
Here are the available modes:

 Heating

 Cooling

 Heating and Cooling
This mode allows you to set heating and cooling temperatures

 Off

4. **To setup WiFi:**
Press the thermostat ring to open the Quick View menu. **Turn** the ring to the Settings Icon, then **press** to select. **Turn** the ring until Network is selected, then **press** to select. **Select** your wifi from the list and type in your password.
